PROFESSIONAL SUMMARY

Backend AI Engineer with hands-on experience building AI-enabled backend systems, RAG applications, REST APIs, data pipelines, reporting services, and asynchronous job workflows. Currently interning at FlyRank AI across Backend AI Engineering and General AI Fluency, where I have built FastAPI services with PostgreSQL/Supabase/JWT, resilient scraping and reporting pipelines, Inngest background jobs, and an LLM-powered RAG personal command center. Strong foundation in Python, SQL, Docker, AWS, embeddings and retrieval.

EDUCATION

B.E. — Computer Science and Engineering

2021 – 2025

New Horizon College of Engineering (VTU), Bangalore | CGPA: 7.35/10

XII Standard — CISCE

2021

East West Model School, Purba Bardhaman, West Bengal | 86%

TECHNICAL SKILLS

AI/ML & Backend: Python, FastAPI, RESTful APIs, Scikit-learn, TensorFlow, Embeddings & Retrieval Fundamentals

Cloud & DevOps: AWS (EC2, S3, SageMaker), Docker, Git/GitHub, Linux, CI/CD

Data Engineering: SQL (MySQL, SQLite), MongoDB, ETL Pipelines, Data Modelling, Pandas, NumPy

Analytics & BI: Power BI (DAX), Tableau, Excel, Statistical Analysis, Trend Analysis

Data Acquisition: BeautifulSoup, Scrapy, OpenCV

EXPERIENCE

Backend AI Engineering Intern

Jul 2026 – Present

FlyRank AI (Remote)

- Completed the General AI Fluency · Impact Project, building an LLM-powered RAG Personal Command Center with Express.js, local retrieval, grounded responses, and server-side API-key handling.
- Built a FastAPI Task Management API progressing from in-memory CRUD to SQLite, PostgreSQL/Docker, and Supabase JWT authentication and authorization.
- Engineered a resilient Books scraping pipeline using Requests, BeautifulSoup, Pydantic, caching, retries/backoff, validation, change detection, and JSON/CSV reporting.
- Developed a PDF reporting service using FastAPI, SQLite, SQL aggregation, Playwright/Chromium, report serving, 404 handling, and same-day idempotency.
- Implemented Inngest background jobs for asynchronous report generation with 202 responses, status polling, retries/backoff, and cron-scheduled heartbeat monitoring.

AI/ML Engineer Intern

Feb 2025 – May 2025

Rooman Technologies, Bangalore

- Engineered 8+ classification and regression models (Python, Scikit-learn, TensorFlow), automating model scoring pipelines that eliminated ~40% of manual reporting steps and accelerated weekly business review cycles.
- Boosted model F1 scores by ~15% over baseline across 3 production iterations via feature engineering, hyperparameter tuning, and stratified cross-validation on imbalanced churn and customer-risk datasets.

Python Programming Intern

Nov 2023 – Dec 2023

VaultOfCodes (Remote)

- Delivered analysis-ready datasets from 5+ e-commerce sources by engineering Python scraping pipelines (BeautifulSoup, Scrapy), eliminating fully manual data collection.
- Reduced dataset noise by ~30% via Pandas-based deduplication logic; automated recurring collection via scheduled scripts, saving ~5 hours/week.

PROJECTS

Task Management REST API | *FastAPI • PostgreSQL • Docker • Supabase • JWT • Python*

- Collaborated on a FastAPI-based REST API implementing complete task CRUD operations, request validation, health checks, HTTP status handling, and interactive Swagger/OpenAPI documentation.
- Contributed to the backend's progression from in-memory storage to SQLite and PostgreSQL, including Docker Compose configuration and persistent database storage.
- Worked on Supabase JWT authentication and authorization, integrating Bearer-token protection for task endpoints and protected/admin routes with appropriate 401/403 access control.

Customer Churn Prediction API | *Python • FastAPI • Scikit-learn • Docker • AWS EC2/ECR/S3/SageMaker*

- Engineered a production-ready ML REST API using a Random Forest Classifier trained on 7,000+ telecom records, achieving 85% test accuracy for customer churn prediction.
- Deployed the API on AWS EC2 using Docker, ECR, CI/CD, IAM-controlled access, and SageMaker-managed training, implementing an end-to-end ML deployment workflow.
- Built FastAPI prediction, health-check, and Pydantic validation endpoints for reliable model inference and production-ready API communication.

Real-Time Twitter Sentiment Analysis | *Python • NLP • PySpark ML • Apache Kafka • Spark Streaming*

- Collaborated in a team to develop a real-time sentiment analysis pipeline using Apache Kafka, Spark Streaming, and PySpark ML, applying technical documentation and implementation references.
- Contributed to sentiment classification and model evaluation, achieving 92% accuracy on the project dataset.
- Worked on integrating the ML component with the streaming workflow to process and classify incoming tweet data continuously.

Business Intelligence Dashboards — Power BI | *Power BI • DAX • Power Query • SQL*

- Designed 14 business-ready dashboards across Sales, HR, and Finance using SQL, Power Query, DAX, interactive KPIs, drill-through filters, and slicers.
- Automated reporting workflows and delivered stakeholder-ready visualizations, contributing to an estimated 50%+ reduction in manual reporting effort across covered business functions.

Business Intelligence Dashboards — Tableau | *Tableau • LOD Expressions • Calculated Fields • Parameters • SQL*

- Delivered 15 Tableau workbooks across 6+ datasets, transforming sales, logistics, and environmental data into interactive business insights.
- Implemented LOD expressions, calculated fields, parameters, and multi-source joins to support analysis across multiple data granularities and business dimensions.
